

Of the offered options for altering the voting weights we are in favour of option 3 to limit a single members influence to 3% of the cast votes.

We would also like to see alterations in the voting level requirements to be changed from 90% of votes to 90% of votes *CAST* so that member apathy doesn't unduly influence Nominet policy.

Before a final decision is made we would like to see more details on the calculation of the weighting and prefer that it be based on some form of logarithmic calculation to more evenly spread the voting rights - there has been some excellent discussion of methodologies for the calculation
